TEAM: The number of tasks on the team task table needs to be reflected accurately and is based strictly on the number of current active tasks only — which would be need-to-have, nice-to-have, or "needs revision". Every other task is considered to be inactive, whether it has been marked complete, is on pause, or does not have a need-to-have or nice-to-have design designation.

MY DAY: When a task is marked as a collaboration, the title needs to be adjusted and the task is separately managed by each of the individuals who were collaborating. In other words, if two people are supposed to have a conversation about something, then both of them must work it as complete in order for it to be done. In other words, a collaborative task becomes two separate tasks. There also needs to be a callout indicator at the top of the description that clearly indicates that it is a COLLABORATIVE TASK.

TASKS: If there is a warning or something missing from the creation process — like when you're trying to group together a bunch of tasks — it should be locked at the top so it doesn't get hidden.

Screenshot — Page 2: Convert to Subtask modal with validation error

TASKS: We need to make a functionality for tasks where a task can be made into a task template that can go onto a list. That task would then just be able to be assigned to a different project and to a different team member for a different client, but the starting task should have all of the description and difficulty level pre-filled.

BUG (shown above): In the Convert to Subtask modal → Create New Super Task, a validation error fires: "Project: Invalid input: expected string, received null". Fix so Project is pre-populated from context or properly required before submit fires.

Page 3 of 16

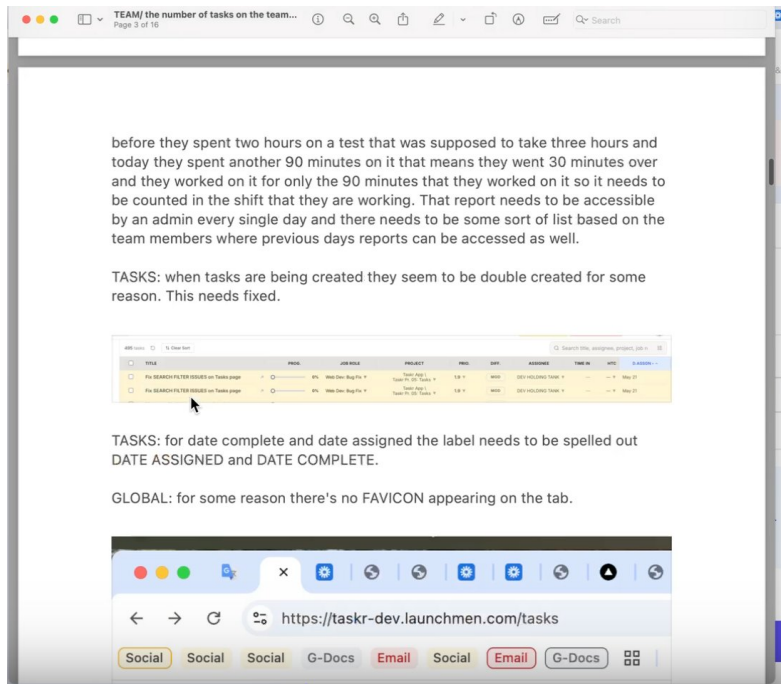

MY DAY: Any manager can create a task and, as part of the HTC estimation, a team member has to click that they are willing to take the task. If they think the task has been estimated wrong in terms of the difficulty estimate — like if they think it's actually complex and it's been listed as moderate — or if they are confused by the description or the description is missing, the team member can say do not accept the task.

ADMIN PAGE: So that's something that needs to go on the team page; however it needs to be built into the admin page for tasks that have been returned by team members, so that an admin or an executive can take note of which managers are getting returned tasks all the time. As far as creating tasks though, any manager, any admin, or any executive can create a task without any review being required. Any lead in any given job role can also create a task in that job role for anyone on the team. It's very simple: if you are above someone in the hierarchy you can create a task for them.

TASKS: The only team members that can create tasks for themselves are admin and executives. If a manager creates a task for themselves then that needs a review by the admin or executive. If any team member wants to create a task for themselves other than admin and executives, they can create one but then that's what goes into the pending area where it needs to be approved. And it needs to highly alert an executive or manager, or a manager for team members.

MY TASKS: The team member who is actually responsible for a task cannot move their progress slider unless they have it as the task that they are currently focused on — so in other words, green. They must also give an HTC estimate before they can start it and basically acknowledge that they accept the task as-is and it doesn't need any revision from the manager who assigned it.

ADMIN PAGE: The completed page which is a table of completed tasks needs to look like any task table. Right now it's still in the old look and doesn't work well. It needs to display as if it is a regular task page but with all of the completed tasks with strikethrough in them and light gray which is the color and formatting for completed tasks.

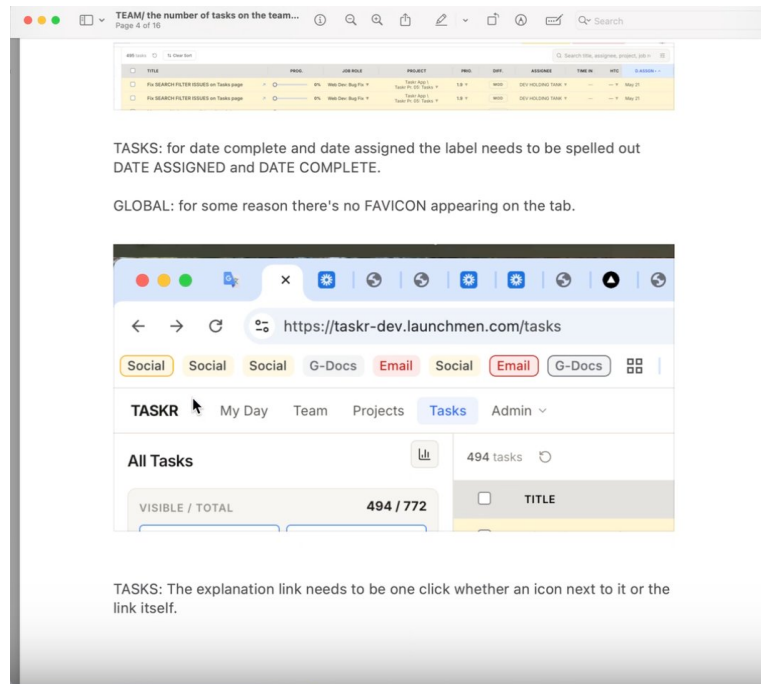

Screenshot — Page 4: Double-created tasks bug + date label note + missing favicon

(Continued from prev. page): Before they spent two hours on a test that was supposed to take three hours, and today they spent another 90 minutes on it — that means they went 30 minutes over and they worked on it for only the 90 minutes that they worked on it — so it needs to be counted in the shift that they are working. That report needs to be accessible by an admin every single day and there needs to be some sort of list based on the team members where previous days' reports can be accessed as well.

TASKS: When tasks are being created they seem to be double-created for some reason. This needs fixed. (See screenshot above — same task appears twice.)

TASKS: For date complete and date assigned, the label needs to be spelled out: DATE ASSIGNED and DATE COMPLETE.

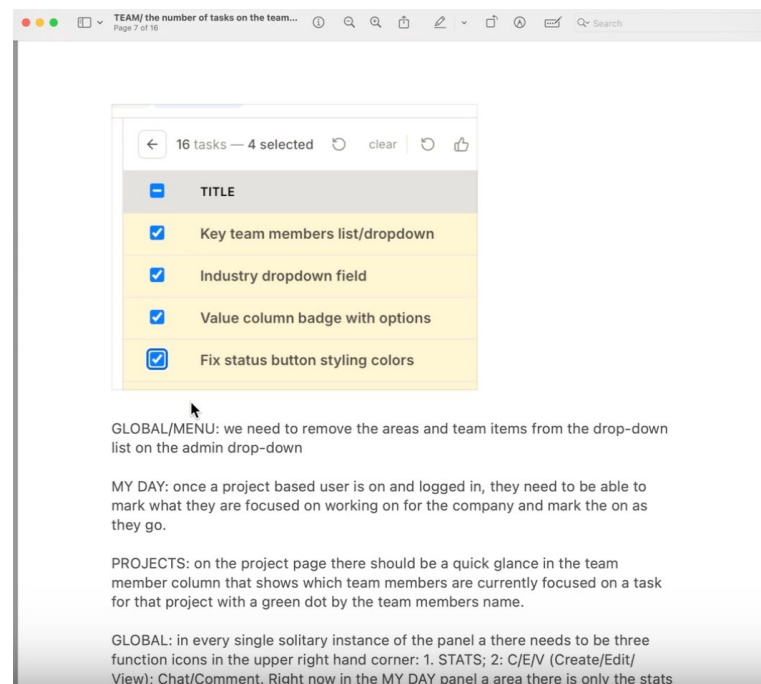

GLOBAL: For some reason there's no FAVICON appearing on the tab.

Screenshot — Page 5: Favicon missing on browser tab + explanation link note

TASKS: The explanation link needs to be one click — whether an icon next to it or the link itself.

Screenshot — Page 7: Selected tasks + global menu / projects / panel notes

GLOBAL/MENU: We need to remove the Areas and Team items from the drop-down list on the Admin drop-down.

MY DAY: Once a project-based user is on and logged in, they need to be able to mark what they are focused on working on for the company and mark them as they go.

PROJECTS: On the project page there should be a quick glance in the team member column that shows which team members are currently focused on a task for that project — with a green dot by the team member's name.

GLOBAL: In every single solitary instance of Panel A there needs to be three function icons in the upper right-hand corner: 1. STATS; 2. C/E/V (Create/Edit/View); 3. Chat/Comment. Right now in the MY DAY Panel A area there is only the Stats icon.
